

Topic: Unit 11 – Constructing, Measuring and Using Geometric Notation		Duration: 17 lessons	Composite:
Key vocabulary:	Powerful knowledge components	Core knowledge Components	Links to previous and future topics
Geometry Line segment Perpendicular SSS, SAS, ASA Clockwise Anti-clockwise Compass Angle Obtuse Acute Reflex Right angle Quadrilateral Polygon Protractor Pie chart	<p>I know that:</p> <ul style="list-style-type: none"> • a full turn is 360° • the compass points are at successive 45° angles • clockwise is the direction the hands of a clock travel and anticlockwise is the opposite direction <p>I know how:</p> <ul style="list-style-type: none"> • to name polygons • to draw measure and draw straight lines accurately with a ruler • to describe degrees of turn using compass points and the knowledge that a full turn is 360° • to classify angles as acute, obtuse, right angle or reflex, including when describing angles within polygons • to use a protractor • to accurately measure and draw angles up to 360° using a protractor 	<p>I know that:</p> <ul style="list-style-type: none"> • perpendicular lines are at right angles to each other • SSS – side, side, side • SAS -side, angle, side • ASA – angle, side, angle <p>I know how:</p> <ul style="list-style-type: none"> • to label shapes and angles according to geometric labelling conventions • Use knowledge of geometry to solve problems and explain reasoning • to draw and label line segments • to draw and label perpendicular lines • to use knowledge of angles to solve problems and explain reasoning • to recognise and describe the properties of types of triangle • to recognise and describe the properties of types of quadrilateral • to recognise and describe the properties of types of polygon • to recognise and describe the properties of types of triangle • to recognise and describe the properties of types of triangle • to construct triangles using SSS, SAS and ASA • to construct more complex polygons • Interpret simple pie chart using proportion and then a protractor • to draw pie charts 	<p>Previous:</p> <p>Name 2D shapes</p> <p>Classify angles as acute obtuse and right angle</p> <p>Use a ruler accurately</p> <p>Interpret simple pie charts</p> <p>Start to use a protractor</p> <p>Future:</p> <p>Construct more complex shapes</p> <p>Answer more complex problems involving geometry</p>

Impressive reading	Impressive speaking	Impressive writing	Resilience	Employability via:
<ul style="list-style-type: none"> • Read out loud • Selective mutism – Peer support or 1:1 teacher support. • Reading Word problems. • Identifying key information from text. 	<ul style="list-style-type: none"> • Speak out loud • Selective mutism – 1:1 peer support/small group. Picture cards. • Explain what a expression/equation or inequality etc is. • Using topic specific vocabulary when reasoning about answers and proofs. • Taking part in group discussions for investigations. 	<ul style="list-style-type: none"> • Famous Mathematician - historical review. • Use key vocabulary in explanations and reasoning. • Explain, in words, the meaning of equation, inequality, expression, substitution etc. 	<p>Compare methods. Did you use the same approach? Did your partner discover a better approach than yours? What strategies can you use to when substituting in a value? Is there a more efficient method? Can you find a pattern? Can you prove the hypothesis?</p>	<p>Raise students' awareness of their problem-solving strategies and to encourage them to critique them in an effort to develop better strategies. Use of work-related problems in worded questions. Functional maths skills for everyday life, including the workplace.</p>

SEND

- Visually impaired check resources have correct paper, colour and font size.
- Key vocabulary introduced using precision teaching prior to a new topic. Can be shared via printed documents or Google classroom.
- Repetition of key vocabulary regularly throughout lessons, especially equation, expression, simplify, like terms, inequalities, substitute
- Adjust language and speed of explanation when needed.
- Allow more processing time for solving problems both verbal and written where needed. Lesson notes can be shared through Google classroom both before and after lessons.
- Repetition – start each lesson with knowledge recall based questions.
- Praise and reward for effort and engagement.
- Demonstrate and model mathematic problems. Students can take photographs for recording modelling or printed copies given.
- Multi-sensory- kinaesthetic learning created so that pupils can move the maths learning around – dienes, counters, Cuisenaire rods, etc.
- Technology use of interactive white boards to demonstrate methods – Sites such as Mathsframe, Mathswatch (clips: 7, 33, 36, 93, 95, 137) can be used to reinforce skills.
- Cultural capital – Mathematician of the week, link questions to local area, such as shopping calculations, sharing a bill, calculating project costs, planning an event

- Share exemplar work on Google Classroom.

Topic: Unit 12 – Developing Geometric Reasoning		Duration: 11 lessons	Composite:
Key vocabulary:	Powerful knowledge components	Core knowledge Components	Links to previous and future topics
Angle Vertically opposite Triangle Polygon Right angle Interior Exterior Alternate Corresponding	<p>I know that:</p> <ul style="list-style-type: none"> • angles at a point sum to 360° • angles on a straight line add to 180° • angles in a triangle sum to 180° • angles in a quadrilateral sum to 360° • a square symbol is used at a right angle <p>I know how:</p> <ul style="list-style-type: none"> • to find a missing angle in a triangle • to find a missing angle on a straight line • to find a missing angle around a point • to provide examples to explain reasoning 	<p>I know that:</p> <ul style="list-style-type: none"> • vertically opposite angles are equal <p>I know how:</p> <ul style="list-style-type: none"> • to solve problems involving angles at a point • to solve problem involving angles on a straight line • solve problems involving vertically opposite angles • solve problems involving angles in a triangle • to solve problems involving angles in a quadrilateral • to use triangles to find the interior angles in a polygon • to find the exterior angle of a polygon by subtracting the interior angle from 180° • to use investigation to find the rules for angles in parallel lines • to recognise and use the rules for angles in parallel lines and use the vocabulary associated – alternate angles, corresponding angles, vertically opposite angles • to apply all angles knowledge to mixed and more complex problems and explain reasoning 	<p>Previous:</p> <p>Angles in a triangle</p> <p>Angles on a straight line</p> <p>Naming polygons</p> <p>Future:</p> <p>More complex problem involving a combination of shape and parallel line angle rules</p>
