

Topic: Unit 13 – Angles in parallel lines and polygons		Duration: 15 lessons	Composite:
Key vocabulary:	Powerful knowledge components	Core knowledge Components	Links to previous and future topics
Angle notation Transversal Parallel Exterior Interior Polygon Quadrilateral Triangle Alternate Corresponding Co-interior Vertically opposite	<p>I know that:</p> <ul style="list-style-type: none"> -angles on a straight line add to 180° -angles around a point add to 360° -vertically opposite angles are equal -angles in a triangle add to 180° -angles in a quadrilateral add to 360° <p>I know how:</p> <ul style="list-style-type: none"> -to use basic angle notation -to use triangles within polygons to calculate the sum of the interior angles -to use the properties of quadrilaterals to solve missing angle problems -to use a compass -to use my knowledge of angle rules to solve problems, such as missing angles, and explain my reasoning 	<p>I know that:</p> <ul style="list-style-type: none"> -the transversal is a line drawn across a set of parallel lines <p>I know how:</p> <ul style="list-style-type: none"> -to use angle rules to find missing angles - to investigate angles within parallel lines -to identify and calculate with co-interior, corresponding and alternate angles -find missing angles within parallel lines and solve more complex problems -to construct triangles and special quadrilaterals -to investigate the properties of special quadrilaterals, including diagonals -to understand the sum of interior and exterior angles of a polygon -to calculate missing interior angles in a regular polygon -to start to prove simple geometric facts (Higher) -to construct an angle bisector (higher) -to construct a perpendicular bisector of a line segment (Higher) 	<p>Previous:</p> <p>Basic angle rules</p> <p>Angles in a triangle</p> <p>Quadrilateral properties</p> <p>Future:</p> <p>More complex problem involving angles</p>

Impressive reading	Impressive speaking	Impressive writing	Resilience	Employability via:
<ul style="list-style-type: none"> • Read out loud • Selective mutism – peer 1:1 or teacher support • Reading Word problems • Identifying key information from text. • Interpreting written information. 	<ul style="list-style-type: none"> • Speak out loud • Selective mutism – 1:1 discussion, visual communication cards. • Explain calculation strategies. Present evidence when investigating patterns and hypotheses. • Share mathematical reasoning and understanding using key vocabulary. 	<ul style="list-style-type: none"> • Students show logical steps in developing an argument. • Use of appropriate specific language to explain reasoning. 	<p>Compare methods. Did you use the same approach? Did your partner discover a better approach than yours? Why do you think so? Can you do it a different way? Why is this one trickier? What strategy will you use to help you? How can we solve this?</p>	<p>Raise students' awareness of their problem-solving strategies useful for the workplace. Use of work-related problems in worded question. Functional maths skills for everyday life, including the workplace.</p>

SEND

- Visually impaired check resources have correct paper, colour and font size.
 - Key vocabulary introduced using precision teaching prior to a new topic.
 - Repetition of important vocabulary needed in the lesson., especially highlighting the difference between a digit and a number.
 - Adjust language and speed of explanation when needed.
 - Allow more processing time for solving problems both verbal and written where needed. Lesson notes can be shared through Google Classroom.
 - Repetition – start each lesson with knowledge recall based questions.
 - Praise and reward for effort and engagement.
 - Demonstrate and model mathematic problems – Students can take a phot of modelled examples and/or examples can be shared via Google classroom before and after lesson.
 - Multi-sensory- kinaesthetic learning created so that pupils can move the maths learning around – Use place value cards/counters, place value boards, dienes etc
 - Technology- use of interactive white boards to demonstrate methods – e.g. Mathsframe, Mathswatch (**clip 138, 139**) - website for games involving place value.
- Cultural capital – Mathematician of the week, link problem solving to local business and the local area e.g. School population size compared to Telford population size

Topic: Unit 14 – Area of π Trapezia and Circles		Duration: 7 lessons	Composite:
Key vocabulary:	Powerful knowledge components	Core knowledge Components	Links to previous and future topics
Circle Rectangle Triangle Parallelogram Perpendicular Area Height Radius Circumference Compound shape	<p>I know that:</p> <ul style="list-style-type: none"> -the area of a rectangle is base x height -the area of a triangle is $\frac{1}{2}$ x base x height -the area of a parallelogram is base x perpendicular height <p>I know how:</p> <ul style="list-style-type: none"> -to calculate the area of triangles, rectangles and parallelograms -to use a calculator to find the area of a circle -to calculate the circumference of a circle using π x diameter -to calculate the radius/circumference when the area is known 	<p>I know that:</p> <ul style="list-style-type: none"> -the first 4 digits of pi are 3.142 (3dp) -the formula for the area of a circle is πr^2 -the area of a trapezium is $\frac{1}{2}(a + b)$ x height where a and b are the parallel line lengths <p>I know how:</p> <ul style="list-style-type: none"> -to solve problems involving the area of triangles, rectangles and parallelograms -to calculate the area of a trapezium -to calculate the area and perimeter of compound shapes -to solve problems involving area and perimeter and explain reasoning -to solve more complex problems with area and perimeter of compound shapes -to investigate the radius, diameter, circumference and area of a circle -to find the area of a circle and parts of a circle with and without a calculator 	<p>Previous:</p> <p>Area of a circle</p> <p>Area of a rectangle and triangle</p> <p>Future:</p> <p>More complex problems involving area and perimeter</p>
